☒ **Enforce HTTPS**
— Required for your site because you are using the default domain (programming-systems-lab.github.io)

HTTPS provides a layer of encryption that prevents others from snooping on or tampering with traffic to your site.
When HTTPS is enforced, your site will only be served over HTTPS. [Learn more.](#)

Archive this repository
Mark this repository as archived and read-only.

Archive this repository

Delete this repository
Once you delete a repository, there is no going back. Please be certain.
We will also delete 1 fork since this is a private repository.

Delete this repository

This is from github settings.

I think its a positive example of error prevention.

Github knows which actions can cause problems if used incorrectly and they clearly demarcate these in a red box labeled DANGER ZONE with a red theme. By intentionally separating and highlighting potentially dangerous actions from the rest it helps prevent the user from doing something by mistake. If someone does do anything by mistake these could have more serious consequences than other errors.
