

Twitter Report

a) Screenshot

b) Images are always the right size -- How

- I used the Twitter bootstrap dynamic sizing columns to keep all the images the right size. I used `col-md-3` and `col-md-4`

c) The blue square is taller than the rest -- how?

- I set the `img` to take up 100% of the parent element. In the tiles without the blue I inserted a row for the title. The blue box doesn't include row for the title.

d) When the site is 500px wide what happens?

What's happening?

Title1

Title2

- The site sits the images 1 on top of the other when the screen is 500px wide. You can put the images 2 to a row if you wany. I did this by adding the col-6 class. Screenshot below.
